Education

KIET Group of Institutions

Bachelor of Technology – Computer Science Engineering (AI & ML) — CGPA: 7.5/10

Ghaziabad, IN

2023–2027

Experience

Defence Research and Development Organisation (DRDO)

Jan 2025 – Jun 2025

Software Engineering Intern (Cryptography & Systems)

Delhi, IN

- Developed secure, reusable backend modules in C/C++ following industry-standard specifications and clean code practices.
- Optimized system performance by refactoring memory and I/O workflows, improving throughput and reliability.
- Designed automated unit and edge-case tests to ensure correctness, stability, and maintainability of core components.
- Collaborated with cross-functional teams in a research-driven environment, translating requirements into production-ready solutions.
- Strengthened foundations in secure system design, documentation, and scalable architecture transferable to enterprise web platforms.

Projects

FinSight360 – Financial Insights Web Platform (GitHub)

- Built RESTful APIs using Node.js and Express for structured data ingestion and querying.
- Designed modular backend logic and database schemas, aligning with CMS-style plugin architectures.
- Developed responsive, user-friendly dashboards using React, HTML, CSS, and JavaScript.
- Focused on clean separation of concerns, scalability, and maintainable code.

MetaShop – Full-Stack E-Commerce Application (GitHub)

- Implemented full-stack features including dynamic pricing, analytics dashboards, and real-time updates.
- Built reusable UI components and backend services inspired by plugin-based system design.
- Improved performance and user experience through efficient API design and frontend optimization.

FESLA Cryptanalysis – Applied ML Research Platform (GitHub)

- Engineered structured data pipelines and feature extraction workflows with strong emphasis on correctness and documentation.
- Reinforced best practices in testing, modular design, and reproducible systems.

Technical Skills

Languages: JavaScript, C/C++, Java, Python

Web Development: HTML, CSS, JavaScript (ES6+), React, Node.js, Express.js, SQL (MySQL concepts), REST APIs

Backend Concepts: Plugin-based architecture, reusable modules, basic web security principles

Tools: Git, GitHub (PR-based workflows), GitHub Actions, Linux (basic), Docker (basic)

Core CS: DBMS, OOPS, Operating Systems

Currently Learning: WordPress Theme & Plugin Development, PHP, MySQL

Achievements & Certifications

- **Open Source Contributions:** Active contributor with pull requests, bug fixes, and documentation improvements using Git-based workflows.
- **Competitive Programming:** CodeChef **3 Star** (1862) — Codeforces **Specialist** (1480) — LeetCode **Top 9%**.
- **Hackathons:** Smart India Hackathon (SIH), Innotech Hackathon.
- **Professional Focus:** Clean code, scalable systems, continuous learning, and remote collaboration.
